

JavaScript Practice Sheet

Topics: Arithmetic, Unary, Assignment, Comparison, Logical, Ternary, if, if-else, else-if

Easy (5)

1. Declare two variables a=15 and b=4. Print addition, subtraction, multiplication, division, and remainder.
2. Let x=10. Apply x++, ++x, x--, --x and print the value after each step.
3. Create a variable marks=80. Add 5 using += and then subtract 10 using -=.
4. Check whether 25 > 18 and 10 == '10'. Print the results.
5. Take age=20. Use an if statement to print 'Eligible to Vote' if age >= 18.

Medium (5)

6. Take three numbers and print the largest using if-else-if.
7. Check whether a number is even or odd using the ternary operator.
8. Write a program to check whether a year is a leap year using if-else.
9. Use logical operators to check if a user can log in: age>=18 AND hasID=true.
10. Compare two numbers and print whether they are equal, greater, or smaller.

Hard (5)

11. Build a simple calculator (+, -, *, /, %) using if-else-if based on an operator variable.
12. Check if a number is positive, negative, or zero, and also whether it is even or odd.
13. Find the largest of four numbers using nested if statements.
14. Calculate grade: >=90 A, >=80 B, >=70 C, >=60 D, otherwise F using else-if ladder.
15. Create a discount system: purchase>=5000 =>30%, >=3000 =>20%, >=1000 =>10%, else 0%. Print final amount.
